

IPC 144 Quiz Two.

Open a terminal client to `matrix.senecacollege.ca`

Create a text file with a text editor called `quiz.txt`.

While answering the questions keep saving the file to make sure no information is lost if you get disconnected.

When done save and exit the editor submit your quiz like this:

```
~fardad.soleimanloo/submit ipcq2 <ENTER>
```

Answer the following code snippets:

1: Include the standard input output library.

2: create two integer variables called `cnt` and `num`.

3: print the following statement without going to new line:

```
>Number of hellos? <
```

4: Write a command to read an integer from the keyboard called `num`;

5: Print the statement `Hello!` and go to new line `num` times. Use an integer called `cnt` for counter. (if `num` is 5, the print `Hello!` 5 times.

6: assemble the above 5 steps into a complete program that asked the user for the number of `Hello`'s to print and then prints them.
