

Login to [matrix.senecacollege.ca](http://matrix.senecacollege.ca) and create a file called "quiz.txt"

Write your quiz in this file. When writing a quiz first write the quiz number and your name on top of the file. Your name must be as it appears on your student card.

Repeatedly save your file as you are going through the quiz so if the connection is lost you don't lose any answers.

When done issue this command to submit your quiz:

```
~fardad.soleimanloo/submit ipcq1 <ENTER>
```

for later quizzes only the number in the above command changes.

Quiz 1:

- 1- What should be written at the beginning of each quiz in ipc 144.
- 2- When do you need to save your answers in a quiz?
- 3- What is the command to submit this quiz.
- 4- What will be the command to submit quiz number2?
- 5- What is a CPU in a computer and what does it stand for?
- 6- How many bits is in a byte? What is the largest number a byte can hold?
- 7- Write ONLY a printf command to print your name in two separate lines; first name in first line and middle and last name on second line.
- 8- Having the following integer variable:  
int Age;  
Write only two lines of code; one printf and one scanf to ask the user for her/his age and read the value into the Age variable.
- 9- Name four types in C language and identify if they are integers or floating point numbers.
- 10- Having:  
int a = 2, b = 3, c = 5, d;  
what is the value of d after this:  
d = (c%3)+a \* b;
